

# .358 NORMA MAGNUM

Introduced into the U.S. in 1959, the .358 Norma Magnum is a short, belted magnum cartridge intended to work through a standard length action. It is nearly identical to the wildcat .35-338. The .358 Norma Magnum delivers approximately the same performance as the larger .375 H&H Magnum and is suitable for all North American big game.

While never chambered in an American production firearm, the .358 Norma Magnum has enjoyed limited success in custom rifles.

There is no SAAMI pressure limit for the .358 Norma Magnum. Norma factory ammunition fired in our test barrel produced a pressure of 63,900 P.S.I. These loads to not exceed that pressure.
